Experience

Bond Street / Founding Engineer
June 2014 - Present, New York, NY

Helped build out early technology, processes, and team. Developed early data security and infrastructure needs alongside consumer facing product details. Integrated with 3rd party services to collect, parse, and provide analytics tools around bank deposit data. Built internal licensing and compliance safeguards. Put in place loan allocation and sale infrastructure. Developed technical interview questions and helped build out technical team and processes.

eBay / Software Engineer
July 2012 - May 2014, New York, NY

Took over an internal homepage prototype and, alongside my team, scaled it from a proof of concept to the global eBay homepage experience. In particular, scaled a live MongoDB service to a fully-sharded production scale MySQL based backend service that powered the homepage, mobile app, and search pages.

Hunch (acquired by eBay) / Software Engineering Intern
2010 - 2011, New York, NY

Built Hunch.fm - integrated YouTube, Soundcloud, and Vimeo APIs with Hunch recommendations API to deliver endless personalized music streaming.

Thumbtack / Software Engineering Intern
June 2009 - August 2009, San Francisco, CA

Built out early CMS and analytics tools to expose user engagement metrics and other KPIs.

Education

Stanford University / BS, Computer Science
2008 - 2012

Concentration in Systems. Relevant coursework includes algorithm design/analysis, combinatorics, computer networking, parallel computing, machine learning, and advanced operating systems.
